***Please note:** The outline may slightly change due to important factors such as student requests, feedback, video sequence or scheduling and technical considerations. However, we will keep you updated on any adjustments to ensure a smooth learning experience.

Main Course

Mission 0:

Be a Critical Thinker

Module 0.1:	**Mindset Over Syntax** This module trains you to approach problems like an engineer: understanding logic flow, breaking problems down, structuring clean, modular code and more.
Module 0.2:	**Data Structures That Matters** Learn the data structures that truly make a difference in modern JavaScript applications. Go beyond just knowing what arrays, objects, and other structures are;understand them deeply. Discover how choosing the right data structure can improve efficiency, scalability, and readability.
Module 0.3:	**Algorithms in Action** Algorithms aren't just for coding interviews. They power the core of real-world JavaScript systems. This module brings them to life through practical examples and performance insights.

Mission 1:

Be a Typescript Technocrat

Module 1:	**Explore Basic Types of Typescript** This module covers the foundation by exploring typeScript setup, basic data types, array, objects, functions, optional types, literal types, spread operator, rest operator, destructuring, type alias, union & intersection types and many more.
Module 2:	**Explore Advanced Types of Typescript** This module is designed to level up your typeScript skills by exploring types, interfaces,type assertion, type guards, generics,constants, asynchronous typescript,conditional, mapped and utility types with real-world use cases and more.
Module 3:	**Object Oriented Typescript** This module explores object-oriented programming in TypeScript, covering object, class, access modifiers, getter, setter, statics, polymorphism, inheritance, abstraction, encapsulation, and more.
Module 4:	**Assignment 1**

Next Level Web Development

Mission 2:

Be a Node, Express & SQL SuperStar

Module 5:	**Basic Fundamentals of Node.js** Understand the core of Node.js, its power for backend development, and explore essential modules like fs, http, path, and more.
Module 6:	**Explore Node.js Core Modules** Dive deeper into Node.js built-in modules like fs, http, path, and os to understand how they power server-side functionality and file handling efficiently and more.
Module 7:	**Explore Express.js- A Node.js Framework** Learn to create routes, handle requests and responses, use middleware, and structure your server for scalable backend applications and more.
Module 8:	**Intro to SQL for Backend** Learn the basics of SQL and how to use it for backend development — from creating and managing databases to writing queries that store, retrieve, and manipulate data effectively.
Module 9:	**Advance CRUD using Typescript, Express & PostgreSQL** Leverage TypeScript, Express, and PostgreSQL to build powerful CRUD operations. Manage transactions with ease, boost performance, handle complex database tasks efficiently, and enable detailed logging for better monitoring and debugging.
Module 10:	**Assignment-2**

Next Level Web Development

Mission 3:

Be a RDBMS Rockstar

Module 11:	**Relational Database Concepts** This module introduces database basics—understanding data, information, and DBMS. Explore relational models, table structure, and key types like super, primary, foreign, and composite keys. Learn top-down design techniques, relationship types, and cardinality. Finally, use tools to create your first ER diagram.
Module 12:	**Database Normalization** Learn to structure databases efficiently using normalization. Understand anomalies, functional dependency, and apply 1NF, 2NF, and 3NF. Resolve many-to-many relationships with junction tables and complete your ER diagram. Get started with PostgreSQL, install it, and explore data flow using PSQL.
Module 13:	**Advanced SQL Queries** Master complex SQL operations like joins, subqueries, indexing, and aggregations to handle real-world data challenges efficiently.
Module 14:	**PostgreSQL Advanced Features** Explore PostgreSQL's powerful features such as JSON support, window functions, stored procedures, and performance optimization techniques.
Module 15:	**RDBMS Case Studies – Real-World Database Design** Apply your SQL and PostgreSQL knowledge to real-world scenarios by analyzing, designing, and optimizing relational databases for practical applications.

Next Level Web Development

Mission 4:

Be a Prisma- Next.js Ninja

Module 16:	**Prisma ORM Essentials** Dive into Prisma relationships! Learn how to integrate Prisma ORM with your backend to simplify database operations, manage schemas, and write cleaner, type-safe queries with ease.
Module 17:	**Explore Prisma by Building an App Part-1**
Module 18:	**Explore Prisma by Building an App Part-2**
Module 19:	**Fundamentals Next.js** Understand the core concepts of Next.js, including pages, routing, and server-side rendering, to build fast, scalable, and SEO-friendly web applications
Module 20:	**Explore Next.js Core Concepts Part-1** Dive into essential Next.js concepts like file-based routing, dynamic routes, and API routes to build interactive web applications.
Module 21:	**Explore Next.js Core Concepts Part-2** Advance your Next.js skills by exploring data fetching methods, server-side rendering, static generation, and optimization techniques.
Module 22:	**Next.js Authentication System** Learn to implement secure authentication in Next.js using sessions, JWT, and third-party providers for real-world applications.
Module 23:	**Assignment-3**

Next Level Web Development

Mission 5:

Be a Full Stack Developer with AI Integration (Backend)

(Industry-Standard Project-1)

Module 24:	**Requirement Analysis & ER Diagram** Learn how to gather and analyze project requirements, and design Entity-Relationship (ER) diagrams to model databases effectively for backend development.
Module 25:	**Building PH Healthcare Backend Part-1**
Module 26:	**Building PH Healthcare Backend Part-2**
Module 27:	**Building PH Healthcare Backend Part-3**
Module 28:	**Building PH Healthcare Backend Part-4**
Module 29:	**Building PH Healthcare Backend Part-5**
Module 30:	**Building PH Healthcare Backend Part-6**
Module 31:	**Building PH Healthcare Backend Part-7**
Module 32:	**Building PH Healthcare Backend Part-8**
Module 33:	**Assignment-4**

Mission 6:

Be a Full Stack Developer with AI Integration

(Frontend)

(Industry-Standard Project-1)

Module 34:	**Building PH Healthcare Frontend Part-1**
Module 35:	**Building PH Healthcare Frontend Part-2**
Module 36:	**Building PH Healthcare Frontend Part-3**
Module 37:	**Building PH Healthcare Frontend Part-4**
Module 38:	**Building PH Healthcare Frontend Part-5**
Module 39:	**Building PH Healthcare Frontend Part-6**
Module 40:	**Building PH Healthcare Frontend Part-7**
Module 41:	**Building PH Healthcare Frontend Part-8**
Module 42:	**Assignment-5**

Mission 7:

Be a Golang Genius

Module 43:	**Getting Started with Golang** Set up your Go environment and write your first programs to get familiar with the language.
Module 44:	**Deep Dive into Go Fundamentals** Master Go's core concepts include variables, data types, functions, and control structures.
Module 45:	**Explore Advanced Concepts of Go** Learn advanced Go topics such as goroutines, channels, interfaces, and error handling.
Module 46:	**Explore Go Backend Framework** Discover the popular Go backend framework and how to build scalable web applications.
Module 47:	**Advanced CRUD using Go Backend Framework** Implement complex CRUD operations, database interactions, and RESTful APIs using Go.
Module 48:	**Assignment-6**

Mission 8:

Be a Full Stack Developer with Golang

(Industry-Standard Project-2)

Module 49:	**Building PH Tour Management Backend Part-1**
Module 50:	**Building PH Tour Management Backend Part-2**
Module 51:	**Building PH Tour Management Backend Part-3**
Module 52:	**Building PH Tour Management Backend Part-4**
Module 53:	**Building PH Tour Management Backend Part-5**
Module 54:	**Building PH Tour Management Backend Part-6**
Module 55:	**Building PH Tour Management Backend Part-7**
Module 56:	**Building PH Tour Management Backend Part-8**
Module 57:	**Guideline for Building PH Tour Management Frontend** Learn step-by-step how to structure and develop the frontend of the PH Tour Management project, applying best practices for UI, components, and state management.
Module 58:	**Assignment-7**

Next Level Web Development

Mission 9:

Be Docker & Nginx Nomad

Module 59:	**Introduction to Docker** Get started with Docker, understand containers vs virtual machines, set up Docker on your system, and run your first container via VS Code.
Module 60:	**Docker Images & Containers** Learn the difference between images and containers, build custom images with Dockerfile, run containers, and manage images with DockerHub.
Module 61:	**Docker Volumes and Managing Data** Manage app data using Docker volumes, named volumes, bind mounts, and configure .env and dockerignore files.
Module 62:	**Docker Networks and Cross-Container Communication** Understand how containers communicate with each other, the host, and the web. Set up Docker networks and explore IP management.
Module 63:	**Building Multi-Container Applications with Docker** Dockerize MongoDB, Node.js, and Next.js apps, connect containers, persist data, and secure your database container.
Module 64:	**Multi-Container Orchestration with Docker Compose & Utility Containers** Use Docker Compose for multi-container apps, create service files, and streamline development with utility containers.

Module 65:	**Reverse Proxy with NGINX** Learn how to set up NGINX as a reverse proxy to route client requests to backend servers securely and efficiently.
Module 66:	**Load Balancing with NGINX** Explore NGINX load balancing techniques to distribute traffic across multiple servers for improved performance and reliability.

Reward Courses

Softech Nexus - A Next Level Job Placement Program

- Build essential “Soft Skills” to become industry ready
- Prepare for real interviews through personalized mock sessions
- Receive expert-led professional training for success
- Improve your English proficiency through English Club and more

Mission :

Be An AWS Adventurer

- Module 1: Getting Started With Cloud Computing
- Module 2: Comprehensive S3 And IAM Guide
- Module 3: Mastering Linux Essentials: A Beginner's Guide
- Module 4: Mastering Linux Essentials: Permissions, Processes, And Utilities
- Module 5: EC2 Essentials: Build, Deploy, And Scale With AWS
- Module 6: Server Deployment With NGINX And EC2
- Module 7: Automating CI/CD With GitHub Actions
- Module 8: Hosting An Application With GitHub Actions (CI/CD)

Mission :

Be A Testing Titan

- Module 1: Getting Started With Unit And Integration Tests
- Module 2: Understanding Advance Mocking Technique And Testing React App
- Module 3: Debugging React Tests & Rest API Testing With Jest And Supertest

Mission :

Be A SWE Starter

- Module 1: Foundations of Software Engineering
- Module 2: Software Design & Architecture
- Module 3: Testing & Deployment Strategies
- Module 4: Quality, Maintenance and Ethics

Let's Code Your Next Level Career
